

Define Transforms

```

1  transforms: {
2      from: [
3          {
4              type: 'shortcode',
5              // Shortcode tag can also be an array of shortcode aliases
6              tag: 'caption',
7              attributes: {
8                  // An attribute can be source from a tag attribute in the shortcode content
9                  url: {
10                     type: 'string',
11                     source: 'attribute',
12                     attribute: 'src',
13                     selector: 'img',
14                 },
15                 // An attribute can be source from the shortcode attributes
16                 align: {
17                     type: 'string',
18                     shortcode: ( { named: { align = 'alignnone' } } ) => {
19                         return align.replace( 'align', '' );
20                     },
21                 },
22             },
23         ],
24     },
25 }

```
